QMS ASSET INTEGRITY

CORPORATE OVERVIEW

Our capabilities

DELIVERY NETWORK

Osborne, Largs North, Elizabeth, Whyalla and Roxby Downs in SA, and Naval Base in WA.

QMS Asset Integrity brings inspection, laboratory testing and protective coatings into the same work package. An owner can use one team to assess damage, check a repair and document the condition of the asset at handover.

What QMS delivers

Inspection & NDT

We examine welds, measure remaining wall thickness and map indications so engineers can locate the areas that need attention.

Mechanical testing

We test weld coupons and material specimens for strength, ductility, impact behaviour and hardness, and examine weld cross-sections.

Surface protection

Our Elizabeth South facility supports abrasive blasting and industrial coatings. We also apply thin-film ceramic systems for suitable components.

Integrated maintenance

We plan examination and coating hold points around fabrication, shutdown or vessel availability, and link records to each item.

Quality and reporting

QMS holds NATA accreditation 18957. We confirm the applicable activity, method and testing site in the quotation.

TO DISCUSS A PROJECT

Send the asset list, location, specification and programme.
